FLATKART

Payment Policy Accepted payment flows, payment states, failed transactions, and security

Document control

Details Policy version Version 1.0 Effective date 1 October 2026 Applies to Orders placed through

Flatkart's online

shopping platform Policy owner Customer Experience & Operations

Purpose. This policy explains the customer-facing rules, process steps,

responsibilities, and support route for the subject shown above.

Important corpus note. Sample policy corpus for RAG testing. Business-specific

details and legal terms require review before publication.

1. Payment methods and checkout

This policy explains the payment process and how Flatkart handles common payment-status questions. 1.1 Available methods Checkout displays the payment methods currently available for the customer's order and location. Availability may depend on provider service, order value, risk checks, or temporary technical conditions. 1.2 Final amount Before payment, the checkout summary should show item price, discount, shipping charge where applicable, and total payable. Customers should review this amount before authorising payment. 1.3 Provider processing Card, UPI, net-banking, wallet, and other payment methods may be processed by an external payment provider. Flatkart relies on the provider's transaction status and reference for reconciliation.

2. Payment statuses explained

2.1 Initiated The customer has started the payment flow, but a final success or failure has not yet been confirmed. 2.2 Successful The provider has confirmed payment success and the order system has recorded the result. Customers should retain the order confirmation. 2.3 Failed or pending A failed status means the provider reported failure. Pending means the final result is not yet known or has not synchronised. A bank debit alone may not prove that the merchant received a completed payment.

3. Failed, pending, or debited transactions

3.1 First checks Check the order history, confirmation email, provider app, and transaction reference. If the order is absent or pending, do not repeatedly pay without checking the first attempt. 3.2 Debit without order confirmation Contact support with the approximate time, amount, payment method, and provider transaction reference. Never send a full card number, CVV, password, or OTP. 3.3 Reconciliation The payments team compares provider status, order logs, and settlement records. If a duplicate completed charge is confirmed, the case is reviewed under the Refund Policy.

4. Payment security and fraud prevention

4.1 Sensitive information Flatkart support should never ask customers to disclose passwords, OTPs, CVV codes, or full card numbers. Customers should complete authentication only in the official payment flow. 4.2 Suspicious messages Do not follow payment links from unexpected messages. Use the official platform or the payment provider's app to check status. Report suspicious requests to support. 4.3 Risk review Orders flagged for payment, fraud, or verification review may require additional checks. A review may delay confirmation while the relevant team checks the transaction.

5. Refunds, charges, and invoices

5.1 Refund routing An approved refund is normally routed to the original payment method where supported. The Refund Policy explains approval, initiation, and provider posting. 5.2 Unexpected charge If a customer does not recognise a charge, support should check the order and payment references. Customers should also contact their bank or payment provider through official channels when necessary. 5.3 Invoice and tax details The order invoice should reflect the order items and charges recorded at checkout. If a billing detail appears incorrect, contact support with the order ID and a description of the correction requested.

6. Payment troubleshooting table

6.1 Details to provide Provide the order ID if available, amount, date/time, payment method, and transaction reference. Redact unrelated account information from screenshots. 6.2 Support handling Support should distinguish technical failure, provider-pending status, confirmed payment, and refund-posting delay. Each requires a different next action. Problem What to check Next action Debited, no order Order history and provider reference Contact support for reconciliation Pending status Latest provider result Wait for status update; avoid duplicate payment Duplicate debit Transaction references and final statuses Request payment review Refund not posted Initiation date and refund reference Check with provider/bank if target passed

7. Payments — illustrative transaction status chart and FAQ

The chart is fictional training data and is not evidence of actual Flatkart payment success or failure rates. 7.1 Quick answers A bank debit without an order confirmation should be checked against the provider reference. Avoid duplicate payment attempts until the first status is understood. 7.2 Security reminder Flatkart will not need a password, OTP, CVV, or full card number to investigate an ordinary payment-status request. Illustrative payment status distribution Success Pending Failed Reversed 0 20 40 60 80 Illustrative transaction count provider-confirmed states, and deduplicated transaction records.

Quick reference and customer support

Use the policy sections above to identify the applicable rule and next action. When a case does not fit a listed example, the support team reviews the order record and the facts provided by the customer. Topic Quick rule Effective date 1 October 2026 Policy version Version 1.0 Support email support@flatkart.example Support hours Monday to Saturday, 9:00 AM–6:00 PM IST, excluding published holidays When contacting support, include the order ID, registered email or phone number, product name, relevant dates, and a short description of the issue. Do not send passwords, full card numbers, CVV codes, or one-time passwords.

Policy interpretation

This document is part of the Flatkart sample policy corpus. Where an order-specific message gives a more specific operational instruction, retain that message and contact support if the two appear inconsistent. No customer should be asked to share payment authentication secrets.

Payment method reference

Payment method	What to check
UPI	Transaction status and UTR/reference
Card	Bank statement and payment status
Net banking	Bank confirmation
Wallet	Wallet transaction history

Illustrative chart
